

PROBLEM Organizations have more information than ever, but much of it lives in separate places. Existing tools are good at showing data, reports, and trends. They are much less useful at showing how those pieces connect—and what may be starting to take shape.	SOLUTION KRYLO brings information from different sources together, maps the relationships between them, and shows what is taking shape around a company, market, or other subject.	UNIQUE VALUE PROPOSITION KRYLO does not predict outcomes. It detects and maps how information is connecting—relationships, convergence, and formations that are emerging across multiple sources.	CHANNELS & OUTREACH STRATEGY Start with founder-led outreach to investment research, corporate strategy, innovation, intelligence, and technology teams. Digital: LinkedIn, X, and the specialized newsletter / Substack ecosystem where investors, analysts, strategists, founders, and technology leaders discuss markets, emerging technology, capital, and structural change. Use Hacker News selectively for technical audiences. Real-world: Industry conferences, investor and analyst events, strategy forums, innovation networks, incubators, and university business communities. Engagement: Lead with contextual intelligence and useful observations, using social commentary, targeted outreach, warm introductions, and focused demonstrations to start customer conversations. Marketing: Demonstrate specific maps around specific decision problems, using the resulting conversations to identify design partners, validate use cases, and convert the strongest opportunities into paid pilots.	TARGET CUSTOMER PROFILES Initial focus: Investment research and corporate strategy teams where seeing a developing change earlier can have real economic value. Users: Analysts and researchers who spend significant time gathering information, comparing sources, and trying to determine what matters. Buyers: Team leaders and business leaders responsible for research, strategy, intelligence, and major decisions. Customer pain: Important connections are difficult to see when information is fragmented across sources, requiring people to manually assemble and interpret it. Customer discovery: Determine which problems, maps, and use cases create the strongest value and willingness to pay.
	OUTCOMES Anticipate change. Reduce risk. Discover opportunity. Improve decisions. (ARDI) KRYLO reveals relationships across fragmented information to provide actionable recognition of what is forming, with potential impact across Operations, Strategy, Risk, Finance, Sales & Marketing, Technology & Innovation, and Corporate Development. For customers, the intended result is greater clarity, confidence, and awareness of developing change before it is obvious in any one source. Success will be measured by customer use, demonstrated decision value, willingness to pay, repeat usage, and evidence that KRYLO reveals connections or developing changes conventional tools miss.		STARTUP COSTS & REVENUE STREAMS Start with paid pilots, with payment tied to delivery of a defined map or structural intelligence engagement. Move successful pilots into annual B2B subscriptions or enterprise licenses as use cases become repeatable. Early costs will be cloud infrastructure, data/API access, product development, marketing and customer acquisition, and legal/accounting/security. As the product becomes more repeatable, the goal is to reduce the amount of founder time and custom work required to deliver each customer engagement.	

MY VISION Build KRYLO into the platform for mapping what is forming. 1. Commercial Discovery → Build and sell maps of emerging structural formations. Use those engagements to discover where the maps create the most value, identify repeatable use cases, and prove willingness to pay. 2. API Platform → Turn what we learn through commercial use into an API that allows other products and organizations to consume KRYLO's maps and structural intelligence. 3. Institutional Adoption → Expand those capabilities into institutions and complex operating environments, including industries such as manufacturing, where KRYLO's maps can be consumed at scale. Growth ramp: Build the maps → prove their value → make them consumable → scale their use. 1-year target: Establish a repeatable commercial use case, secure initial paying customers, and prove a path from custom engagements to a scalable product. 5-year boundary: KRYLO becomes a platform used by organizations and other systems to consume maps of structural change at scale.	MY 90-DAY PLAN 1. Talk with potential customers to identify the decision problems where KRYLO could create the most value. 2. Demonstrate the core workflow with a working prototype. 3. Recruit 2–3 design partners and test willingness to pay. 4. Learn what customers need to trust the maps and fit them into their existing work. 5. Use what we learn to define the first repeatable commercial use case and the next product milestone. 6. Identify the strongest repeatable use case and the barriers preventing customers from adopting it. Experiment: Run a small set of demos around one specific decision use case and use the conversations to test the product, value proposition, willingness to pay, and customer adoption barriers.
