

KRYLO HLSD (Deck)

Slide 1 — Executive Summary

Objective (R1):

Launch a dual-portal platform that surfaces *latent collective recognition* (“elephants”) in real time and converts high-signal social awareness into structured analytical insight.

R1 Focus:

- Establish a **live Social sensing layer**
- Demonstrate a **credible Academic/Insight interface**
- Prove the **Social → Insight data flywheel**
- Deliver a visually compelling prototype to sell the long-term vision

Non-Goals (R1):

- Full enterprise tooling
- Advanced ML / prediction
- Monetization execution

Slide 2 — Core Product Hypothesis

There exists significant untapped value in capturing what people already recognize but do not traditionally ask or name.

Implication:

- Recognition ≠ Opinion
- Recognition is earlier, quieter, and more stable than sentiment
- Aggregated recognition can be monetized as **early-signal intelligence**

Slide 3 — R1 Platform Architecture (High Level)

Three-Layer System

1. **Social Portal (Signal Generation)**
 - Live elephant feed
 - Recognition-first interaction
 - User-generated + system-generated elephants
2. **Academic / Insight Portal (Sense-Making)**
 - Structured views into recognition data
 - Slicing & filtering (time, domain, stability)
 - Artifact generation (summaries, metrics)
3. **Bridge Layer**
 - Rules-based promotion from Social → Insight
 - No user disruption
 - Downstream only

Slide 4 — Social Portal (R1 Scope)

Primary Purpose:

Act as a *live sensing surface* for unspoken truths.

Core UI Component:

Elephant Cards (not posts)

Card Types (R1):

- Known Elephants (stable, persistent)
- Emerging Elephants (velocity-based)
- Proposed Elephants (community-validated)

Key Metrics Displayed:

- View count
- Recognition %
- Velocity indicator (↑ / → / ↓)

Design Principle:

Optimized for **viewership**, not participation.

Slide 5 — Social Portal: Key Functional Capabilities

Elephant Lifecycle (R1):

1. Generated (user or system)
2. Observed (views)
3. Recognized (binary acknowledgement)
4. Classified (known / emerging)
5. Eligible for insight promotion

User Actions (Low-Friction):

- Recognize ("I've noticed this")
- Tag story to elephant
- Propose new elephant

Explicitly Excluded (R1):

- Likes / dislikes
- Comment threads
- Debate mechanics
- Identity-based ranking

Slide 6 — Real-Time Feed Logic (R1)

Live Updating Signals:

- Recognition count
- Recognition rate
- Tag velocity
- Geographic/domain spread (if available)

Ranking Logic (Rules-Based):

- Recognition breadth > engagement depth

- Velocity > raw volume
- Stability over time favored

Outcome:

Feed reflects *what's becoming obvious*, not what's loud.

Slide 7 — Academic / Insight Portal (R1 Scope)

Primary Purpose:

Provide a **Palantir-like interface** for collective recognition data.

Audience (R1):

- Researchers
- Journalists
- Strategists
- Policy / ops analysts

Positioning:

Interface to insight, not discussion.

Slide 8 — Academic Portal: Core Views (R1)

View 1: Elephant Explorer

- List of elephants promoted from Social
- Filters:
 - Time window
 - Domain
 - Stability (persistent vs transient)

View 2: Recognition Metrics

- Recognition curve over time
- Recognition vs participation gap
- Confidence indicator (proxy)

View 3: Pattern Summary

- Auto-generated descriptive summaries
- No interpretation / prescription yet

Slide 9 — Bridge Layer (R1 Logic)

Bridge Trigger Criteria (Rules-Based):

- Recognition rate above threshold
- Sustained recognition over time
- Cross-domain tagging

Bridge Behavior:

- Silent promotion to Insight portal
- Optional visual badge in Social ("Research-Backed")
- No forced transitions

Design Principle:

Academic subscribes to Social; Social remains independent.

Slide 10 — Data Model (R1 Simplified)

Core Entity: Elephant

- id
- title
- domain
- social_metrics
 - views
 - recognition_count
 - velocity
- recognition_history
- status (proposed / emerging / known)
- insight_metadata
 - promoted_at
 - stability_score

Key Insight:

Recognition is a first-class data primitive.

Slide 11 — Visual Design Strategy (Sell the Vision)

Social Portal Look & Feel:

- High energy
- Card-based layout
- Motion tied to recognition velocity
- Minimal text, strong pattern naming

Academic Portal Look & Feel:

- Calm, analytical
- Data-first layout
- Whitespace, clarity
- Emphasis on trend lines and structure

Outcome:

Two products, clearly differentiated, clearly connected.

Slide 12 — R1 Technical Architecture

Frontend:

- Static SPA (HTML/CSS/JS or React)
- Modular components per portal

Backend (R1):

- Lightweight API
- Event logging (views, recognition)
- Basic aggregation

Storage:

- Elephant metadata

- Recognition events
- Time-series summaries

No ML Required in R1

Slide 13 — R1 Success Metrics

Product Metrics:

- Recognition rate per elephant
- % of elephants reaching “known” status
- Repeat view sessions

Signal Quality Metrics:

- Recognition vs engagement ratio
- Stability over time
- Cross-domain overlap

Narrative Metric (Qualitative):

- “This feels accurate” feedback from early users

Slide 14 — R1 Risks & Mitigations

Risk: Becomes another opinion platform

→ **Mitigation:** No debate mechanics, recognition-only interaction

Risk: Data too noisy

→ **Mitigation:** Velocity + persistence thresholds

Risk: Academic feels boring

→ **Mitigation:** Visual storytelling via data, not text

Risk: Privacy concerns

→ **Mitigation:** Aggregate-only, no individual scoring

Slide 15 — Why This Is Compelling (For Stakeholders)

Strategic Value:

- New data category (collective recognition)
- Early-signal intelligence
- Cross-domain applicability

Commercial Value (Future):

- Enterprise insight subscriptions
- Media intelligence
- Policy & risk sensing

Defensibility:

- Proprietary data
- Longitudinal signal
- Incentive-aligned design

Slide 16 — R1 Deliverables

 Live Social feed with elephant cards

- ✓ Recognition-first interaction model
- ✓ Insight portal with exploratory views
- ✓ Bridge logic demo
- ✓ Visually compelling prototype

Outcome:

A credible, differentiated product that clearly demonstrates a new category.

Slide 17 — R1 → R2 Roadmap (Teaser)

- Advanced slicing (geo, role, industry)
- Automated insight summaries
- Enterprise views
- API access
- Monetization pilots
