

KRYLO: VC PITCH DECK

Slide 1 — The Problem

What people recognize and what gets discussed have diverged.
Existing platforms amplify reaction, not recognition.

Slide 2 — The Insight

Recognition is an earlier, quieter, more stable signal than opinion.
No major platform measures it.

Slide 3 — The Product

KRYLO surfaces “elephants” — unspoken but widely recognized patterns — and tracks their emergence in real time.

Slide 4 — Two Portals

- Social: Live recognition feed
- Insight: Pattern analysis interface

One generates signal.

The other extracts meaning.

Slide 5 — Why This Is New

We capture **pre-narrative data** that:

- Cannot be scraped
- Cannot be recreated retroactively
- Compounds over time

Slide 6 — The Data Moat

Recognition rate, velocity, stability, and breadth form a new data primitive.
This is infrastructure, not content.

Slide 7 — Market

Institutions, media, policy, enterprises, research, strategy.
All pay for early signal.

Slide 8 — Monetization

Free sensing layer.

Paid insight, analysis, and access.

Understanding, not attention.

Slide 9 — Defensibility

- Proprietary data
- Longitudinal signal
- Incentive mismatch with incumbents
- Trust as a moat

Slide 10 — Vision

KRYLO becomes the standard interface for collective recognition — the layer between reality and narrative.
